Artificial Intelligence working for you

Announcing the first Realtime Nudity Detection API, based on Artificial Intelligence

Sightengine, an Artificial Intelligence company, has developed the **first Realtime Nudity Detection API** and makes it available to developers worldwide.

This service automatically processes user-generated images and determines if they contain nudity or suggestive scenes in a fraction of a second, hence helping developers **filter and moderate images** in realtime.

This service is already being used in production by hundreds of social networks, dating apps, messaging platforms, gaming and recreational applications, online forums, chats etc. to provide a safe and pleasant experience to end-users.

It is the result of years of Research in Deep-Learning and Computer Vision and is based on proprietary state-of-the-art models.

Sightengine is an Artificial Intelligence company that empowers developers and businesses. Our powerful image and video analysis technology is built on proprietary state-of-the-art Deep Learning systems and is made available through simple and clean APIs.
